

Device Management

Unify PC, Mac, iPad and iPhone Administration

Full lifecycle management of Mac computers

Enable Mac management beyond native Microsoft MECM functionality to discover, enroll and manage Mac devices the same way you manage PCs. Make Mac computers on par with PCs in your corporate network by efficiently managing them.

Apple Mobile Device Management in MECM

Enroll iOS and iPadOS devices in MECM. Secure and configure them using Configuration Profiles and deploy VPP applications without the need for an additional solution. Leverage familiar workflows in the Configuration Manager for creating iOS and iPadOS inventory reports.

No macOS expertise needed for MECM administrators

Parallels Device Management leverages your existing MECM infrastructure, processes, and skills to manage Mac computers and Apple mobile devices. Apply compliance settings and deploy software just like PCs, in a matter of hours instead of deploying a new solution.

Manage Apple devices with a simple plugin

Parallels® Device Management is a plugin that extends Microsoft Endpoint Configuration Manager (MECM) capabilities to manage Mac computers and Apple mobile devices the same as Windows PCs.

Mobile Device Management (MDM) and Apple Device Enrollment Program (DEP) are incorporated too—all in one console.

One Solution. One Central Inventory.

Unified endpoint management that has all types of devices in one place and offers MECM administrators a coherent view on Windows, macOS, iOS, and iPadOS device collections.

Device and Data Protection

Enforce compliance on Apple devices via MECM configuration items and baselines, disk encryption, shell scrips, and monitor compliance via native MECM reporting.

Designed for MECM Administrators

The simple plugin leverages your MECM infrastructure, processes and skills for managing Mac computers and Apple mobile devices—including software discovery, updates, distribution and inventory, just like PCs.

Extend Microsoft MECM capabilities to macOS and iOS

Security and Compliance

- Lock or wipe managed Mac computers and Apple mobile devices remotely
- Deploy Configuration Profiles to macOS and Apple mobile devices
- Create and edit Configuration Profiles with the powerful iMazing Profile Editor
- Use task sequences for comprehensive deployments
- Enable FileVault 2 full-disc encryption with centralized key management

Software Deployment and Patch Management

- macOS software deployment via MECM applications and packages
- macOS software update management and reporting
- Apple Volume Purchase Program (VPP) support
- Self-service application portal for Mac users

Hardware and Software

- Hardware and software inventory reports for macOS, iOS and iPadOS
- Metering for macOS applications
- User logon information reports

DEP Enrollment

- Zero-touch deployment for Mac computers and Apple mobile devices
- User account configuration
- Configuration Profiles
- Execute task sequences
- Automatic assignment of default DEP profiles to new devices

MDM Enrollment

- User-initiated MDM enrollment for Mac computers and Apple mobile devices.

Discovery

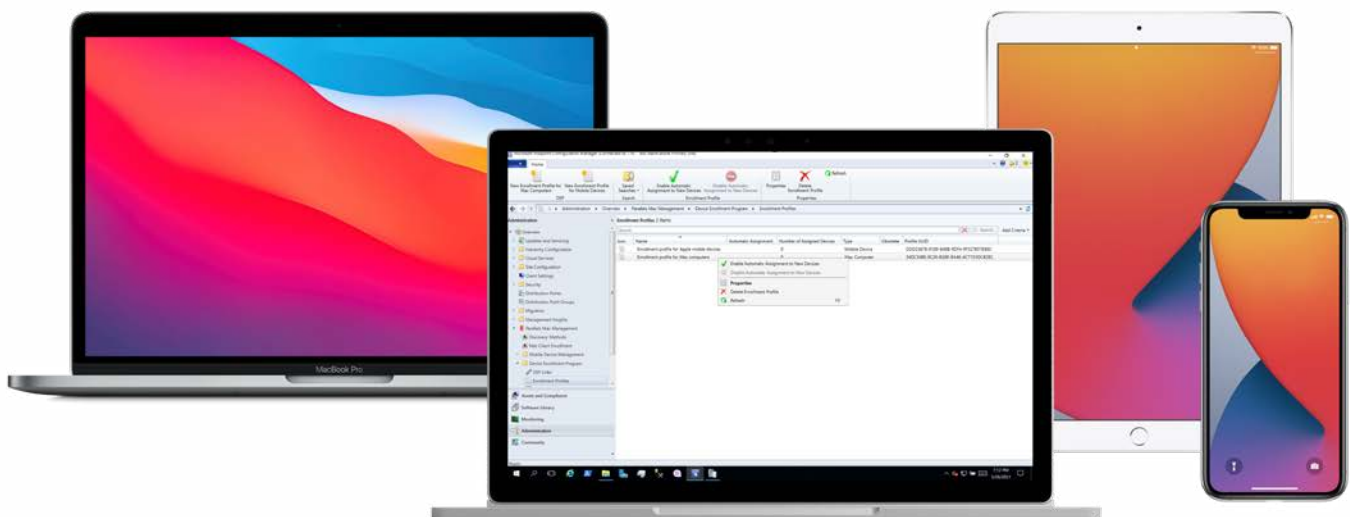

- Network Directory System discoveries

Remote Assistance

- Remote assistance for managed Mac computers via SSH and VNC

Infrastructure

- Internet-based management of Mac clients
- Works with/without PKI infrastructure

“... Since every Apple user no longer has to work as an administrator and can concentrate on his/her own job, [it] has not only had a very positive effect on the productivity of the IT department, but also on that of the departments we serve.”

—IT Administrator, Reykjavik City Administration
